(Bucket, Auger, Core Barrel, Bucket Shaft, Bucket Spring, Kelly Adapter, Etc)
Storage Tanks
Kelly Bar Repairing and Maintenance
Fabrication Works (Gas Cylinder Cages, Steel Structures, Etc)

CROSS SONIC LOGGING (CSL) TESTING TUBES

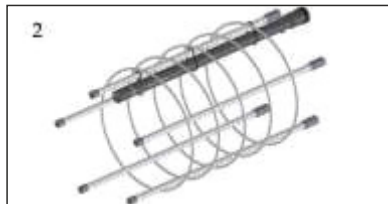

Cross sonic logging testing tubes, CSL tubes are considered to be more accurate and reliable than sonic echo testing. This testing method is not only able to detect defects, but it can help provide information on the nature of the defect, along with its extent, depth, and approximate location.

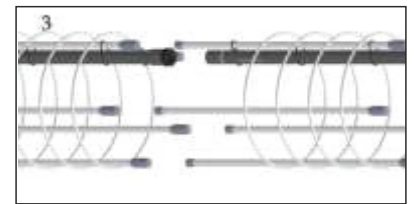

SONIC TUBES INSTALLATION:

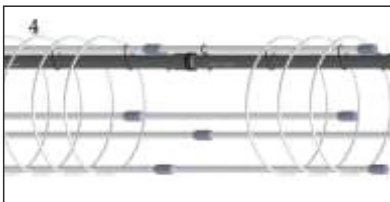

1. Install a bottom cap onto the first sonic tube.

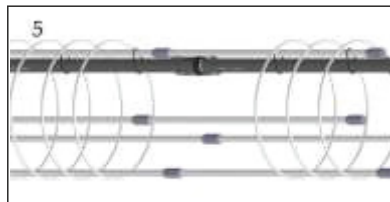

2. Fix the sonic tube to the rebar cage by tying the steel wire around the fixing ears and tube.

3. Fix the next tube to the rebar cage as the step 2.

4. Connect the two tubes completely

5. Connect all the tubes and lower the cage.

Advantages:

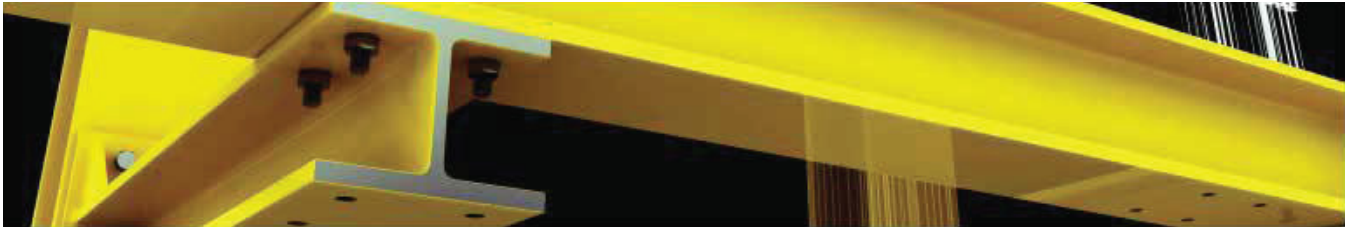

- ★ Fast and easy installation.
- ★ Push-fit assembly.
- ★ No welding required at job site.
- ★ No equipment required.
- ★ Easy fixing to rebar cage.
